

TABLE OF CONTENTS

PREFACE	v
RELATIONSHIPS AMONG MARKOV CHAINS	vii
CHAPTER 1: PREREQUISITES FROM ANALYSIS	
SECTION	
1. Denumerable Matrices	1
2. Measure Theory	10
3. Measurable Functions and Lebesgue Integration	18
4. Integration Theorems	24
5. Limit Theorems for Matrices	31
6. Some General Theorems from Analysis	34
CHAPTER 2: STOCHASTIC PROCESSES	
1. Sequence Spaces	40
2. Denumerable Stochastic Processes	46
3. Borel Fields in Stochastic Processes	48
4. Statements of Probability Zero or One	49
5. Conditional Probabilities	50
6. Random Variables and Means	52
7. Means Conditional on Statements	53
8. Problems	55
CHAPTER 3: MARTINGALES	
1. Means Conditional on Partitions and Functions	58
2. Properties of Martingales	61
3. A First Martingale Systems Theorem	63
4. Martingale Convergence and a Second Systems Theorem	65
5. Examples of Convergent Martingales	73
6. Law of Large Numbers	75
7. Problems	76
CHAPTER 4: PROPERTIES OF MARKOV CHAINS	
1. Markov Chains	79
2. Examples of Markov Chains	81
3. Applications of Martingale Ideas	86
4. Strong Markov Property	88
5. Systems Theorems for Markov Chains	93
6. Applications of Systems Theorems	95
7. Classification of States	98
8. Problems	104

CHAPTER 5: TRANSIENT CHAINS		
1. Properties of Transient Chains		106
2. Superregular Functions		110
3. Absorbing Chains		112
4. Finite Drunkard's Walk		114
5. Infinite Drunkard's Walk		116
6. A Zero-One Law for Sums of Independent Random Variables		119
7. Sums of Independent Random Variables on the Line		121
8. Examples of Sums of Independent Random Variables		122
9. Ladder Process for Sums of Independent Random Variables		125
10. The Basic Example		126
11. Problems		127
CHAPTER 6: RECURRENT CHAINS		
1. Mean Ergodic Theorem for Markov Chains		130
2. Duality		136
3. Cyclicity		144
4. Sums of Independent Random Variables		146
5. Convergence Theorem for Noncyclic Chains		149
6. Mean First Passage Time Matrix		156
7. Examples of the Mean First Passage Time Matrix		158
8. Reverse Markov Chains		162
9. Problems		164
CHAPTER 7: INTRODUCTION TO POTENTIAL THEORY		
1. Brownian Motion		166
2. Potential Theory		169
3. Equivalence of Brownian Motion and Potential Theory		173
4. Brownian Motion and Potential Theory in n Dimensions		176
5. Potential Theory for Denumerable Markov Chains		180
6. Brownian Motion as a Limit of the Symmetric Random Walk		185
7. Symmetric Random Walk in n Dimensions		187
CHAPTER 8: TRANSIENT POTENTIAL THEORY		
1. Potentials		191
2. The h -Process and Some Applications		196
3. Equilibrium Sets and Capacities		203
4. Potential Principles		208
5. Energy		214
6. The Basic Example		219
7. An Unbounded Potential		226
8. Applications of Potential-Theoretic Methods		228
9. General Denumerable Stochastic Processes		233
10. Problems		239

CHAPTER 9: RECURRENT POTENTIAL THEORY

1. Potentials	241
2. Normal Chains	252
3. Ergodic Chains	262
4. Classes of Ergodic Chains	269
5. Strong Ergodic Chains	274
6. The Basic Example	277
7. Further Examples	283
8. The Operator K	288
9. Potential Principles	299
10. A Model for Potential Theory	303
11. A Nonnormal Chain and Other Examples	310
12. Two-Dimensional Symmetric Random Walk	315
13. Problems	319

CHAPTER 10: TRANSIENT BOUNDARY THEORY

1. Motivation for Martin Boundary Theory	323
2. Extended Chains	325
3. Martin Exit Boundary	335
4. Convergence to the Boundary	338
5. Poisson-Martin Representation Theorem	341
6. Extreme Points of the Boundary	346
7. Uniqueness of the Representation	353
8. Analog of Fatou's Theorem	357
9. Fine Boundary Functions	362
10. Martin Entrance Boundary	366
11. Application to Extended Chains	368
12. Proof of Theorem 10.9	374
13. Examples	383
14. Problems	397

CHAPTER 11: RECURRENT BOUNDARY THEORY

1. Entrance Boundary for Recurrent Chains	401
2. Measures on the Entrance Boundary	404
3. Harmonic Measure for Normal Chains	406
4. Continuous and T -Continuous Functions	407
5. Normal Chains and Convergence to the Boundary	409
6. Representation Theorem	411
7. Sums of Independent Random Variables	416
8. Examples	416
9. Problems	423
