- gave talks to the Leningrad Mathematical Society;

In the sixties

In the new position, V.A. Rokhlin became one of the most active and popular professors.

- He gave many talks in various research seminars;
- gave talks to the Leningrad Mathematical Society;
- gave new long special (extra-curriculum) courses

In the sixties

In the new position, V.A. Rokhlin became one of the most active and popular professors.

- He gave many talks in various research seminars;
- gave talks to the Leningrad Mathematical Society;
- gave new long special (extra-curriculum) courses: **Ergodic theory** and **Topology**;

In the sixties

In the new position, V.A. Rokhlin became one of the most active and popular professors.

- He gave many talks in various research seminars;
- gave talks to the Leningrad Mathematical Society;
- gave new long special (extra-curriculum) courses: **Ergodic theory** and **Topology**;
- started a new research seminar: Ergodic theory;

Student seminars.

Environment

Environment

In the sixties, Leningrad was excellent
for a new mathematical research school in topology:

Environment

In the sixties, Leningrad was excellent

for a new mathematical research school in topology:

- Prestige of mathematics was extremely high.

Environment

In the sixties, Leningrad was excellent

for a new mathematical research school in topology:

- Prestige of mathematics was extremely high.
- Math Olympiads attracted smart students to math.

Environment

In the sixties, Leningrad was excellent

for a new mathematical research school in topology:

- Prestige of mathematics was extremely high.
- Math Olympiads attracted smart students to math.
- Mathematical Circles fixed and developed their addiction

Environment

In the sixties, Leningrad was excellent

for a new mathematical research school in topology:

- Prestige of mathematics was extremely high.
- Math Olympiads attracted smart students to math.
- Mathematical Circles fixed and developed their ~~addiction~~

Environment

In the sixties, Leningrad was excellent

for a new mathematical research school in topology:

- Prestige of mathematics was extremely high.
- Math Olympiads attracted smart students to math.
- Mathematical Circles fixed and developed their ~~addiction~~ love to math.

Environment

In the sixties, Leningrad was excellent

for a new mathematical research school in topology:

- Prestige of mathematics was extremely high.
- Math Olympiads attracted smart students to math.
- Mathematical Circles fixed and developed their ~~addiction~~ love to math.
- High schools with specialization in math gave a solid base.

Environment

In the sixties, Leningrad was excellent

for a new mathematical research school in topology:

- Prestige of mathematics was extremely high.
- Math Olympiads attracted smart students to math.
- Mathematical Circles fixed and developed their ~~addiction~~ love to math.
- High schools with specialization in math gave a solid base.
- Mathematical life was centered at MAT-MEX

excellently located in a nice old building.

Environment

In the sixties, Leningrad was excellent

for a new mathematical research school in topology:

- Prestige of mathematics was extremely high.
- Math Olympiads attracted smart students to math.
- Mathematical Circles fixed and developed their ~~addiction~~ love to math.
- High schools with specialization in math gave a solid base.
- Mathematical life was centered at MAT-MEX

excellently located in a nice old building.

Rokhlin's students

I have known about 20 graduate students of V.A. Rokhlin:

L. Abramov, S. Yuzvinsky, V. Itenberg, M. Gromov, B. Malyj, A. Dymov,
R. Belinskaya, Y. Eliashberg, O. Viro, S. Popov, V. Kharlamov, V. Nezhinskij,
K. Karciauskas, V. Turaev, N. Ivanov, N. Mishachev, N. Netsvetaev, M. Gusarov,
V. Zvonilov, S. Finashin.
